

Tnemec representatives have offered their expertise for decades by presenting coatings courses for architects, engineers, specifiers and contractors. Participants can choose to complete courses for AIA credits about a variety of subjects, including coatings for floors and walls, surfaced masonry wall systems, architectural steel protection and more.

ON DEMAND

TNE015

Mitigating Thermal Bridging with Fluid-Applied Coatings

Thermal bridging can have a significant impact on a building envelope's performance. This presentation discusses using fluid-applied coatings to minimize thermal bridging in new and existing buildings.

TNE018

Environmental Regulations when Specifying Paint and Coatings

Understand the complexities of specifying performance-based coating systems on environmentally sensitive projects. Learn how to interpret the changing legislation and requirements of air districts throughout the United States, as well as the requirements of voluntary programs such as LEED and other government mandated environmental control measures.

TNE020

High-Performance Protection: Coatings for Interior and Exterior Architectural Applications

Learn the various types of high-performance coating systems for interior and exterior exposed architectural applications and how they can provide additional protection and beautification for high-profile projects or areas subjected to harsh environments and abuse.

TNE021

High-Performance Protection for Floors and Walls

Epoxy and urethane floor and wall systems continue to gain popularity in the commercial, institutional and industrial markets due to their durability, versatility and seamless installation. Learn about the importance of high-performance floor and wall systems, proper surface preparation, material selection and specification.

TNE022

Selecting Exterior Topcoats Based on Aesthetic Performance

Learn about the aesthetic performance of the most common types of topcoats, how to examine the effects of UV exposure on color and gloss retention, and how to select and specify topcoats based on expected levels of gloss and color retention performance.

TNE024

The True Value of High-Performance Coatings

Learn how to determine the true value of coatings and the importance of quality by evaluating performance characteristics and life-cycle costs. Discover how to include high-performance coatings in specification through the review of case studies and test standards.

TNE025

USDA and FDA Compliance for Coatings, Linings and Floors in Regulated Plants

This course discusses the influence of USDA/ FDA regulations on selecting and specifying high performance coatings for use in food, beverage and pharmaceutical plants as well as generic paint systems to be used for both compliance and site performance.

TNE026

Fluent Translation: Correlating Fluoropolymer Lab Data with Real World Exposure

This webinar was developed to aid architects in understanding the importance of performance testing. Participants will learn about different topcoat options, relevant performance testing and how to interpret the test results. The main benefit of the webinar will be to aid architects in the coating selection process. Other valuable pieces include review of case studies and other coating attributes of FEVE fluoropolymers.
